Source: Office for National Statistics (Nomis) © Crown copyright Data accessed 18/04/2012

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

The figures given are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of people out work. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment. To avoid seasonal effects, comparisons are best made with the same month in the previous year.

<sup>1</sup> The unemployment rates have been calculated by expressing the numbers unemployed as a percentage of the population aged 16 to 64 as given in the 2010 Mid-Year Population Estimates.

<sup>2</sup> Figures for unemployment by ethnic group are published one month after the main unemployment figures. The Black and Minority Ethnic (BME) unemployment rate is not official and is not compatible with those shown elsewhere on this table. They have been calculated by expressing the number of unemployed in all groups other than White: British as a percentage of the population aged 16 to 64 in that group, as given in the 2001 Census.

<sup>3</sup> Net flows are the total number of people joining the count minus the total number of people leaving the count.

<sup>4</sup> Vacancy statistics relate only to vacancies which are notified to Jobcentres. It is estimated that nationally they represent between 30% and 50% of all vacancies, but the proportion varies geographically, over time, by occupation and by industry.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

## Summary

### Annual change in unemployment

In March 2012 there were 17,421 people in Derbyshire aged 16 to 64 claiming job seekers allowance, 12.2% more than at the same time in the previous year (16,018). This is the smallest annual increase in the last six months, and could indicate that the rate of increase is slowing. The annual rate of increase in Derbyshire was below the regional and national increases (12.6% and 9.9% respectively) .

Annual Percentage Change in Unemployment

Within Derbyshire, the annual percentage change varied considerably between districts, though all districts saw at least some rise. Derbyshire Dales saw the smallest rise (0.9%), while High Peak (10.0%) experienced a greater rise than the national average (see Table 1, page 7).

The gender disparity in the rise in unemployment was less marked than it has been; while female unemployment rose by 12.2%, which was still substantially faster than the male rise (7.2%), the difference was significantly smaller than it was earlier this year.

### Unemployment rates

*For a definition of the various unemployment rates referred to below, please see the Notes and Glossary section.*

The county's claimant unemployment rate of 3.6% in March 2012 remained below the England (4.0%) and East Midlands (4.0%) figures (Table 1, page 7). At district level, the rates in Chesterfield (4.7%), Erewash (4.5%) and Bolsover (4.1%) exceeded the national average. The lowest rates were in Derbyshire Dales (1.9%) and South Derbyshire (2.6%).

At the very local level, just under a third (59) of the county's 179 wards have unemployment rates above the national average, mostly clustered in the urban areas in

the east and north-west of the county (see front cover). Of the 22 wards with the most severe unemployment problems, 7 are located in Chesterfield, 5 in Erewash, 3 in High Peak, 3 are in Bolsover, 2 in North East Derbyshire and 2 are in Amber Valley, while Derbyshire Dales and South Derbyshire had no areas with similar concentrations of unemployed people.

### International rates

In December 2011, the UK unemployment rate was 8.3%. This is below the EU average rate (10.0%) and slightly below the US rate (8.5%), but well above the Japanese (4.5%) rate (Table 5, page 11). Compared with December 2010, the UK rate has risen by 6.4%, while the EU as a whole has risen by only 4.2%. The EU average, however, masks some major differences between individual member states. Germany, for example, saw unemployment fall by 13.6%, while Spain suffered a rise of 12.7%. France still has a higher unemployment rate (9.9%) than the UK, while Germany has a lower one (5.7%). In the US, unemployment fell by 9.6%, but the unemployment rate of 8.5% continues to exceed that of the UK.

The ILO definition of unemployment, used in international comparisons, takes more account of jobless women, so the female unemployment rate in the UK is much closer to the male rate on this measure. Nevertheless, there is still a contrast with the rest of Europe where the female rate is on average as high or even higher than the male rate.

### Young unemployed (under 25 year olds)

In March 2012 there were 5,880 people aged under 25 who were claiming job seekers allowance in Derbyshire (Table 2, page 8). This represents just over a third (33.8%) of all unemployed people in the administrative county, which is well above the national average (29.9%). At district level, the proportion was highest in Bolsover (36.6%) and North East Derbyshire (35.7%). The proportion was lowest in Derbyshire Dales (27.3%), which was the only district below the national average.

Young Unemployed as a Percentage of Total

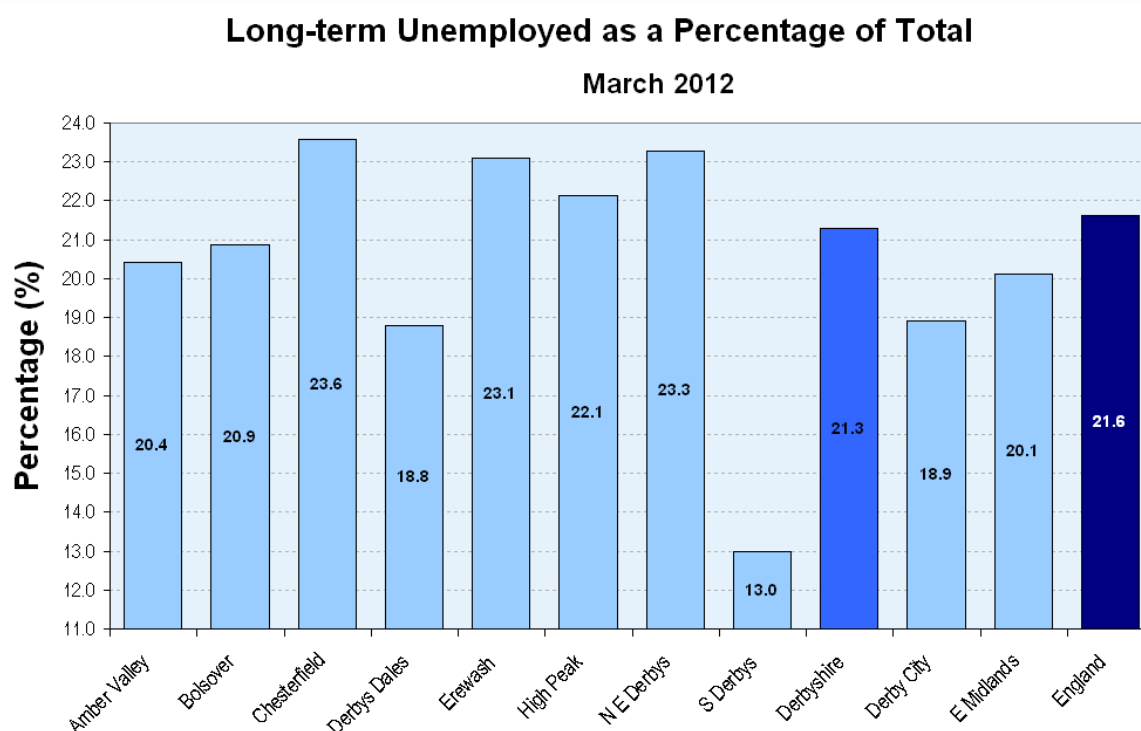

March 2012

Unemployment is more common among young people. Typically the unemployment rate for under 25 year olds is around twice the working age average. In March 2012 the unemployment rate for under 25 year olds in Derbyshire was 7.6% which is higher than the regional (6.7%) and national (6.5%) averages. At district level, Chesterfield (10.0%), Bolsover (9.2%) and Erewash (8.7%) had rates substantially above the national average, but in Derbyshire Dales (4.0%), South Derbyshire (5.9%) and High Peak (6.4%) the rates were below average.

### Long-term unemployed (out of work for more than a year)

In March 2012 there were 3,705 people in Derbyshire who had been claiming Job Seekers Allowance for more than a year (Table 2, page 8). These long-term unemployed accounted for 18.9% of the county's total unemployment, which is less than the national average (21.6%). South Derbyshire (13.0%) and Derbyshire Dales (18.8%) had the smallest proportion of long term unemployed, while Chesterfield (23.6%), North East Derbyshire (23.3%), and Erewash (23.1%) had the highest.

### Unemployment by ethnic group

While claimant count unemployment figures can be analysed by age, gender, and duration of unemployment down to local authority district level, in Derbyshire a detailed ethnic group analysis is not appropriate, given the relatively small number of people who belong to black and minority ethnic (BME) groups and the fact that the published figures are rounded to the nearest 5. Nevertheless, a broad comparison between White British and BME groups at county level yields some interesting results (Table 3, page 9). BME groups represent 2.8% of the county's working age population, and in February 2012 they accounted for 3.4% of those unemployed who revealed their ethnic background. Their unemployment rate was 4.4%, which compares with 3.6% for white British claimants. Thus there is a disparity between white British and BME groups in Derbyshire, with ethnic minorities exhibiting a somewhat greater tendency to be unemployed. However, the disparity is far less marked than at regional and national levels where members of non-

white British ethnic groups are substantially more likely to be unemployed as their white counterparts (more than twice as likely in the East Midlands).

Compared to February 2011, the claimant count unemployment rate for BME claimants in Derbyshire has risen by 17.2%, while the rate for White British claimants has risen more slowly by only 12.6%.

A small proportion of unemployment benefit claimants chose not to supply information about their ethnic background. In Derbyshire the proportion is somewhat smaller (2.6%) than that observed at regional (3.4%) and national level (4.5%). However, a striking feature of the local situation is the size of this group relative to the number of BME claimants. Regionally and nationally, the number providing no ethnic information was less than half the number belonging to BME groups. In Derbyshire, by contrast, the number of claimants who provided no information was considerably larger than the number of BME claimants. If BME claimants are more likely than white British ones to withhold information about their ethnicity, the true unemployment rate for this group in Derbyshire could be substantially higher than the published figures suggest.

### **Unemployment by sought occupation**

In March 2012, nearly a third (29.7%) of Derbyshire's unemployed were seeking employment in elementary occupations. This is above the national average (28.8%), but below the regional figure (32.8%) (Table 4, page 10). Conversely, the proportions wanting employment in associate professional and technical occupations (4.5% of claimants) and administrative and secretarial occupations (7.7%), were below the national average (5.5% and 9.6% respectively).

Compared with March 2011 occupations were split, with some occupations experiencing significant rises in the number of jobseekers, while others experienced falls. The largest percentage reductions were amongst professionals (-11.9%) and managers and senior officials (-10.3%), both of which were much more dramatic than the national averages (-1.5% and 2.2% respectively). The largest increase in the demand for jobs were in sales and customer services (33.5%) and personal services (11.3%).

There are distinct differences between men and women in the sort of jobs they want. In March 2012, 15.0% of female claimants were seeking positions in personal services compared with only 2.0% of males; and more than a third (38.6%) of females were seeking positions in sales and customer services compared with 19.2% of males. Conversely, 15.2% of male claimants wanted jobs in the skilled trades compared with just 2.0% of females; and 11.7% of males were seeking employment as process, plant or machine operatives compared with only 1.2% of females.

### **Claimant flows**

The pool of unemployed labour is not static. New claimants are constantly being added while others move on. The scale of these flows into and out of unemployment is illustrated in Table 6 (page 12). In Derbyshire in the month preceding March 2012, 2,888 people joined the claimant count while 3,099 left. These figures are equivalent to 16.4% of all claimants flowing on, and 17.6% flowing off. Derbyshire had a net decrease (-1.2%), which was larger than the decrease regionally (-0.3%) and nationally (-1.0%). At district level flows varied from 2.8% in South Derbyshire to -2.9% in North East Derbyshire.

Comparisons between different months are unreliable because of regular seasonal variations in the labour market, but some idea of the direction of change can be formed by examining the same month in the previous year. Nationally and locally the overall

pattern is one of decreasing flows, although a small number of areas had increased on or off flows. At district level, South Derbyshire saw on-flows rise slightly (0.9%) while off-flows fell by 10.2%, and Amber Valley saw off-flows rise by 2.7% while on-flows fell (11.9%).

### **Destinations of claimants leaving the count**

*Normally around a quarter to a third of all claimants leaving the unemployment count in England simply fail to sign on again and provide no indication of their destination. It is assumed that many of them will have found employment, although research is required to test this hypothesis.*

In March 2012, a total of 3,100 Derbyshire claimants had left the claimant count since the previous month (Table 7, page 13), a decrease of 255 (-7.6%) on the March 2011 figure. No clear trend can be discerned from this, as the year-on-year comparison changes substantially each month. Of these leavers, 48.2% definitely found work (1,495 jobs) compared with a national average of 42.6%. A further 26.5% in the county failed to sign on again and may also have found work (up to 820 jobs). This compares with a national figure of 32.5%. At district level, the proportion of leavers who definitely obtained employment remained higher than the national average in every area.

### **Vacancies**

In March 2012 there were 3,378 unfilled vacancies in Derbyshire which had been notified to Jobcentres (Table 8, page 14). The industrial breakdown of these vacancies in Derbyshire was broadly similar to the national pattern. Somewhat surprisingly, more than half of these vacancies (58.7%) were provided by the financial, property and business services sector (48.7% nationally). Public administration, education & health accounted for 16.9% (17.0% nationally) while the distribution, hotels & restaurants sector contributed a further 10.5% (13.6% nationally).

Relative to March 2011, there was a significant fall (-5.4%) in the number of vacancies available in Derbyshire, while the national figure rose by 12.9%. Sectors in Derbyshire fell almost across the board, with the only exceptions being financial, property and business services (8.1% rise) and the public sector (61.0% rise).

The occupational breakdown of vacancies locally showed more variance with the national pattern. Associate professional and technical vacancies accounted for 7.5% of local vacancies, but 13.0% of national ones, while more than a quarter of vacancies in Derbyshire were in elementary occupations (25.3%) compared to only 18.7% nationally.

Since March 2011, most occupational groups have seen a reduction in the number of available positions. The exceptions are personal services (64.4%) and elementary occupations (76.4%) which have more vacancies in 2012 than in 2011.

## Notes & Glossary

### Current geographies - wards and super output areas

Claimant unemployment figures, including rates, for 2003 Census wards are available from February 2004. For confidentiality reasons figures for earlier dates have not been released. The denominators are currently derived from the latest available mid-year population estimates. Unemployment counts for super output areas (middle and lower layer) are available, but there are no official unemployment rates at these geographical levels.

Data have been updated to reflect changes in the methodology for assigning claimants to geographical areas that came into effect on the 18th of January 2012. There may be a discontinuity with data contained in bulletins for earlier dates.

### Data suppression

Values of 1 or 2 are replaced by the # symbol in the unrounded claimant count tables. Age and duration figures are already rounded to the nearest 5 and are thus unaffected.

### Claimant count unemployment rates

Claimant count unemployment is defined as the number of people claiming unemployment-related benefits (currently Jobseeker's Allowance and National Insurance credits). Unemployment rates based on this measure are calculated by expressing claimant count unemployment as a percentage of the population aged 16 to 64 as given in the Office for National Statistics mid-year Population Estimates.

### Age-specific unemployment rates

There are no "official" claimant count unemployment rates for individual age groups. The rates shown in this bulletin for people aged under 25 are our own calculations, using as denominators the latest available mid-year population estimates.

### Ethnic group unemployment rates

There are no "official" claimant count unemployment rates for individual ethnic groups. The rates shown in this bulletin for broad ethnic groups are our own calculations, using as denominators the 2001 Census figures for the number of people of working age in each group. Thus the results are not compatible with the overall unemployment rates and do not reflect any population changes that may have occurred since the Census. The figures are published a month later than other unemployment statistics.

### ILO unemployment rates

The ILO (International Labour Organisation) definition of unemployment, which is used in the Labour Force Survey and forms the basis of the international figures in Table 4, is not compatible with the claimant count definition. The unemployed are defined as persons who are without work, are available to start work within the next two weeks, and have actively sought work within the previous four weeks. The ILO unemployment rate is the number of persons who are ILO unemployed expressed as a percentage of the economically active population (employed plus ILO unemployed).

ILO unemployment is now the preferred measure for unemployment at national level, but below regional level the figures are less reliable and less timely than those produced by the claimant count.

### Unemployment Rate by Broad Ethnic Group

February 2012

Source: Office for National Statistics (Nomis) © Crown copyright Data Accessed 18/04/2012

Figures for unemployment by ethnic group are published one month after the main unemployment figures.

All numbers are rounded to the nearest 5 so columns may not sum to totals.

The unemployment rates in this table are not official ones and are not compatible with those shown elsewhere in this document. They have been calculated by expressing the number of unemployed in each broad ethnic group as a percentage of the population aged 16 to 64 in each group, as given in the 2001 Census.

The Black and Minority Ethnic (BME) population is comprised of all ethnic groups other than White: British

<sup>1</sup> The number of claimants of a particular ethnic group, as a percentage of all claimants who chose to reveal their ethnic group when making their claim.

The figures are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of claimants. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment. To avoid seasonal effects, comparisons are best made with the same month in the previous year.

The published figures can be broken down by district, gender, more detailed ethnic group, age and duration of unemployment, but the numbers in Derbyshire are not large enough to warrant such an analysis.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

### Unemployment Rates

*Seasonally adjusted*

December, 2006-2011

Source: EUROSTAT, Luxembourg; © European Communities 2011 Data Accessed 18/04/2012

<sup>1</sup> EU consists of 27 states as of November 2005.

The unemployment figures and rates shown in this table differ from those contained elsewhere in Monthly Unemployment Statistics.

- The figures are derived from Labour Force Surveys rather than the monthly claimant count and use the ILO definition of unemployment. Unemployed persons are those persons aged 15 years and over who
  - are without work
  - are available to start work within the next two weeks
  - and have actively sought employment at some time during the previous four weeks.
- The unemployment rate is the number of unemployed as a percentage of the labour force (people living in collective households are excluded). The labour force is the total of the employed and the unemployed.
- The figures are adjusted to remove the effect of regular seasonal variations. Thus figures for any month can be compared with all other months.

- = percentage change cannot be calculated.

"Other benefits" includes income support, sickness benefit and incapacity benefit.

"Other" includes people who have ceased claiming, whose claim is defective, or who have died, retired, gone abroad or to prison.

The figures are not seasonally adjusted i.e. they do not take account of regular seasonal variations. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend. To avoid seasonal effects, comparisons are best made with the same month in previous years.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

These statistics relate only to vacancies which are notified to Jobcentres. It is estimated that nationally they represent between 30% and 50% of all vacancies, but the proportion varies geographically, over time, by occupation and by industry.

The main use of these figures is for cross-sectional analysis of vacancies as an indication of the types of jobs currently available by area, industry or occupation, rather than absolute measures of the number of vacancies or of changes in these over time. Since the figures are derived from the administrative records of Jobcentres, they are susceptible to changes in Jobcentre procedures for taking and handling of vacancies.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

The figures given are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of people out work. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment.

Figures for individual age groups and long-term unemployment relate to computerised claims only (about 99% of the total) and are rounded to the nearest 5

# Figures with a value of 1 or 2 have been suppressed for confidentiality reasons.

\* The unemployment rates have been calculated by expressing the numbers unemployed as a percentage of the total population aged 16 to 64 as given in the 2010 Mid-Year Population Estimates.

The source of other denominators may vary: currently the 2010 Mid-Year Population Estimates are used for wards; the 2010 Estimates are used for districts and above. The rates for young people are unofficial and have been calculated using population figures from the 2010 Mid-Year Population Estimates.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

The figures given are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of people out work. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment.

Figures for individual age groups and long-term unemployment relate to computerised claims only (about 99% of the total) and are rounded to the nearest 5

# Figures with a value of 1 or 2 have been suppressed for confidentiality reasons.

\* The unemployment rates have been calculated by expressing the numbers unemployed as a percentage of the total population aged 16 to 64 as given in the 2010 Mid-Year Population Estimates.

The source of other denominators may vary: currently the 2010 Mid-Year Population Estimates are used for wards; the 2010 Estimates are used for districts and above.

The rates for young people are unofficial and have been calculated using population figures from the 2010 Mid-Year Population Estimates.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

The figures given are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of people out work. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment.

Figures for individual age groups and long-term unemployment relate to computerised claims only (about 99% of the total) and are rounded to the nearest 5

# Figures with a value of 1 or 2 have been suppressed for confidentiality reasons.

\* The unemployment rates have been calculated by expressing the numbers unemployed as a percentage of the total population aged 16 to 64 as given in the Mid-Year Population Estimates.

The source of other denominators may vary: currently the 2010 Mid-Year Population Estimates are used for wards; the 2010 Estimates are used for districts and above. The rates for young people are unofficial and have been calculated using population figures from the 2010 Mid-Year Population Estimates.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

## Monthly Unemployment Statistics - March 2012

### 11. Claimant Count Unemployment

*Not seasonally adjusted*

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

The figures given are not seasonally adjusted i.e. they do not take account of regular seasonal variations in the number of people out work. Thus differences between one month and the next may merely reflect normal seasonal changes rather than any underlying trend in unemployment.

The numbers unemployed are those recorded in the monthly count of people who are claiming unemployment-related benefits.

# Figures with a value of 1 or 2 have been suppressed for confidentiality reasons.

\* The unemployment rates have been calculated by expressing the numbers unemployed as a percentage of the total population aged 16 to 64 as given in the Mid-Year Population Estimates.

The source of other denominators may vary: currently the 2010 Mid-Year Population Estimates are used for wards; the 2010 Estimates are used for districts and above.

The rates for young people are unofficial and have been calculated using population figures from the 2010 Mid-Year Population Estimates.

The table shows separate totals for wards with 100% national park residents and for all wards with more than 50% national park residents. Wards shown in normal type have all their population within the park; those shown in italics have less than 100% but more than 50%.

Derbyshire refers to the administrative county as established on 1 April 1997 which excludes the City of Derby.

## Contacts

The Research & Information team is part of the Policy and Research Division in the Chief Executive's Office of Derbyshire County Council.

Members of the team may be contacted by dialling ☎ 01629 followed by the numbers shown below, or by email ✉ (firstname.lastname@derbyshire.gov.uk), or by letter at ✉ Policy and Research, County Hall, Matlock, Derbyshire DE4 3AG.

<b>Mel Cave</b>	Policy Manager - Research and Information	539167
<b>Barbara Ackrill</b>	Assistant Research & Information Manager	538253
<b>Laura Howe</b>	Assistant Research & Information Manager	538257
<b>Rob Ward</b>	Research co-ordinator	538251
<b>Fen Jones</b>	Policy and Research Analyst	538253
<b>Dale Burton</b>	Research Analyst	538474
<b>David Gutteridge</b>	Economic Analyst	538252
<b>Mick Evans</b>	Economic Analyst	538246
