Additional smoke-free public spaces consultation results

- 645 people responded to the online questionnaire
- 93% of respondents were Derbyshire residents
- 7% were current smokers
- 35% were previous smokers
- 58% had never smoked
- 96 primary school age children were also consulted via focus groups in school

- 85% of respondents answered yes to the question ‘Would you support the creation of additional smokefree public spaces’?

- 97% of respondents answered either ‘Very Important’ or ‘Fairly important’ to the question ‘How important is it to you that people do not smoke in the presence of children’?

- 86% of respondents answered either ‘Very Important’ or ‘Fairly important’ to the question ‘How important do you feel it is to create additional smokefree public spaces across Derbyshire to reduce the risk of second hand smoke’?

- The vast majority of school children were in favour. The minority that didn’t agree were from families where there is an adult who smokes. There was concern that they wouldn’t get to visit certain places if it was designated smoke free.

99% in favour of primary school gates becoming smokefree

99% in favour of play grounds becoming smokefree
