

Agenda item 7

DERBYSHIRE HEALTH AND WELLBEING BOARD

5 October 2017

Report of Director of Public Health

DERBYSHIRE SEXUAL HEALTH STRATEGY 2017-2020

1. Purpose of the report

To inform the Health and Wellbeing Board about the new Derbyshire Sexual Health Strategy and seek approval of the Strategy.

2. Information and analysis

2.1 Background: why sexual health?

Sexual Health is an important part of both physical and mental health and for general wellbeing as well as being a key public health issue. The Framework for Sexual Health Improvement in England 2013 reiterates at a national level the major improvements being made towards better sexual health including:

- The significant decrease in teenage conceptions and unwanted pregnancy
- More frequent testing for STIs across people in high-risk groups
- People having access to free condoms and self-management to prevent sexually transmitted infections
- Continued progress in protecting our children from sexual abuse and exploitation
- Continued eradication of prejudice based on sexual orientation
- Helping people to have the confidence and ability to say 'no' as well as 'yes'

Such action and improvements are reflected across Derbyshire and the county has a relatively good level of sexual health and wellbeing compared to England.

2.2 Sexual health need in Derbyshire

Recent national data (2016) shows a healthy picture for Derbyshire's sexual health:

- STI rates/ all ages are similar or below regional peers and below regional and national rates – a rate of 491 per 100,000 new diagnoses in Derbyshire compared to 750 per 100,000 nationally and 602 per 100,000 at regional level.

- Under 18 conception rates continue to decline with a rate of 15.4 per 1,000 in Derbyshire compared to the national rate of 20.4 per 1,000.
- Rates of long acting reversible contraception (LARC) – evidenced as the best method of contraception continue to be high in Derbyshire and are above the national and regional rates.

However Derbyshire has some challenges, including:

- A decrease in the uptake of STI testing overall and including uptake by those most vulnerable of poor outcomes such as men who have sex with men, this reflects a decreasing trend nationally.
- A lower Chlamydia detection rate for 15-24yr olds compared to England and also below the recommended rate of 2300 per 100,000 (Public Health Outcomes Framework).
- A higher proportion of people presenting with HIV at a late stage compared to England and although local numbers are very small, the earlier a person receives a diagnosis of HIV, the quicker treatment can be given and a beneficial outcome.
- A lower percentage of abortions performed at 10 weeks gestation compared to England are below England. The earlier a procedure, the safer outcome for the woman.

Derbyshire has further challenges reflective of the national picture where certain population groups are more at risk of poor sexual health outcomes compared to the wider population. These include men who have sex with men (MSM); young people, particularly vulnerable young people; and people living in deprived communities.

2.3 The Sexual health commissioning landscape.

Derbyshire has a comprehensive sexual health delivery system commissioned by three organisations:

- Derbyshire County Council
- Clinical Commissioning Groups
- NHS England

This commissioning is in compliance with the mandated duties outlined in the Health and Social Care Act 2012, summarised on the next page:

Derbyshire County Council	Clinical Commissioning Groups in Derbyshire	NHS England
Community contraception and including: <ul style="list-style-type: none"> • Long Acting Reversible contraception (LARC) in general practice • Emergency contraception in pharmacy Community STI diagnosis and treatment Targeted Sexual Health Promotion and HIV prevention Free Condom scheme (C-Card) Psychosexual services (sexual health element)	Abortion services Vasectomy and sterilisation services Gynaecology services Psychosexual services (non-sexual health element)	HIV treatment and care including pre and post prophylaxis Contraception provided under the GP Contract Cervical screening Opportunistic promotion and testing of STIs Sexual health in prisons Sexual Assault Referral Centres (SARC)

However this presents a complex commissioning landscape for sexual health provision and demands closer working, joint leadership and innovation to ensure the health needs of the population are met. A strategic “whole system” approach is vital for this and the Derbyshire Strategy seeks to offer this.

2.4 The Strategy development

A workshop across commissioning organisations of sexual health provision, associated commissioning and provider organisations was convened in March 2017. The event was led by Public Health, with the support of the Speciality Registrar, to discuss and agree the strategic vision, objectives, measures of success against the county context of health need, public consultation and the national context of policy and guidance.

This discussion and subsequent consultation with stakeholders during April to June 2017 was also underpinned by outcomes and key themes from consultation with the public led by Derbyshire County Council. Resulting themes felt to be important to drive sexual health improvement in Derbyshire included:

- Improved visibility of services
- Improved service availability
- Improved service accessibility, particularly in rural locations
- Addressing barriers to vulnerable groups, with particular focus on reducing fears of prejudice and stigma
- Supporting improved resilience and self-care of sexual wellbeing
- Developing outreach clinical services for those most at risk
- Exploring alternative options for service access e.g. SMS, online services, postal interventions
- Exploring extended community provision through general practice and pharmacy

- Improved communication across partners and the wider sexual health system – at both a strategic and service level
- Ensuring a suitably trained workforce – matching competencies to demands on the service
- Ensuring absolute confidentiality and anonymity

These themes underpin the Vision, Aim and 4 Strategic Objectives within the final Derbyshire Strategy (Appendix 1).

A vision where “all people in Derbyshire, irrespective of factors such as where they live, their age, gender, ethnicity and sexual orientation have good sexual health, and access to good quality, welcoming services without fear of stigma or prejudice.”

A strong emphasis of a whole system approach through the Strategy Aim “to enable the Derbyshire sexual health system to work together to look after their own sexual wellbeing and to provide accessible and welcoming services which are focussed on prevention, early diagnosis and treatment, supporting vulnerable groups and tackling stigma.”

Four objectives to drive the Strategy with focus on:

1. Developing a coordinated, effective and resilient Derbyshire sexual health system responsive to need
2. Continued focus on prevention, early diagnosis and treatment and supporting vulnerable groups
3. Empowerment of Derbyshire residents to manage their own sexual wellbeing and have the confidence to access the range of services should they need them
4. Reduction of the fear of stigma around sexual health and access to services

3. Links to the Health and Wellbeing Strategy

The Derbyshire Sexual Health Strategy echoes some underlying themes across the Health and Wellbeing Strategy priorities as follows:

- The priority ‘create healthy communities’ as this focuses on listening to local people, creating healthy environments and champions a preventative approach. The Sexual Health Strategy emphasises the need to work with local people – service users and those who would benefit. It emphasises the need for good service access ‘local’ to people and has a strong focus on prevention.
- The priority ‘support the emotional health and wellbeing of children and young people’ is linked to the fact that young people and vulnerable young people are a main population group most at risk of poor sexual health outcomes. Their good sexual health is intertwined not only with physical wellbeing but also mental wellbeing.

4. Contribution to the delivery of Joined Up Care Derbyshire

Sexual health is not given a direct focus within the Sustainability and Transformation Plan, however, it provides a real opportunity to make a strong contribution with a focus into the work streams for Prevention, Place and System efficiency.

4.1 Prevention

The Prevention work stream calls for a whole system approach to improve population health and embed prevention across organisations within the system. The Sexual Health Strategy emphasises the need to drive a coordinated, effective and resilient Derbyshire sexual health system towards partners working more closely under the same vision and aim. The Strategy also echoes the theme of self-management across the population for sexual health improvement.

4.2 Place

Place emphasises the prioritisation of people's health needs and tailoring care to meet changing needs including complex. Access to sexual healthcare can be complex for a changing society with its diverse population groups and differing behaviours and cultures. The Sexual Health Strategy emphasises a responsive and innovative approach with strong emphasis on service access. In our ever-changing culture this will not only mean community clinic settings to offer sexual health care and treatment but also the use of primary care and pharmacy and the use of digital technology to offer an improved response to the diverse needs of the population.

4.3 System efficiency

Sexual health interventions are strongly evidenced for their cost-effectiveness and savings to the wider health and social care system. For example investment in the provision of contraception; the reduction of unplanned pregnancies; the reduction of (HIV) and reducing the spread of Sexually Transmitted Infections (STIs) results in significant benefits, both for the NHS and broader health and social care economy, throughout childhood and adulthood. Significant returns on investment are demonstrated in the reduction of costs relating to termination of pregnancy (TOP), maternity care, drug costs and on-going social services, welfare, personalised services, housing and education.

The Sexual Health Strategy seeks to maintain efficiency and savings with its' prevention focus. Additionally the strategy places emphasis on a whole system workforce aligned to demand and innovative ways of providing services to reduce out of area (OOA) patient flow and subsequent OOA spend. With closer working at a strategic level, the Strategy aims to ensure an effective and resilient system with visible savings to the wider health and social care system.

Appendix 1 Derbyshire Sexual Health Strategy 2017-2020.

RECOMMENDATIONS

The Health and Wellbeing Board is asked to:

1. Note the Derbyshire Sexual Health Strategy and give agreement and approval.
2. Agree to receive further updates on progress of the Strategy.

Dean Wallace
Director of Public Health
Derbyshire County Council

Appendix 1. Derbyshire Sexual Health Strategy 2017-2020

June 2017

Vision

All people in Derbyshire, irrespective of factors such as where they live, their age, gender, ethnicity and sexual orientation have good sexual health, and access to good quality, welcoming services without fear of stigma or prejudice

Aim

The aim of the Derbyshire Sexual Health Strategy is to enable the Derbyshire sexual health system to work together to support people to look after their own sexual wellbeing and to provide accessible and welcoming services which are focussed on prevention, early diagnosis and treatment, supporting vulnerable groups and tackling stigma.

Strategic Objectives

To develop a coordinated, effective and resilient Derbyshire sexual health system responsive to the needs of local people.

To ensure a continued focus on prevention, early diagnosis and treatment and supporting vulnerable groups.

To empower Derbyshire residents to manage their own sexual wellbeing and have confidence in the full range of services as and when they need them.

To reduce the fear of stigma around sexual health and accessing sexual health services.

1. Introduction

In 2002 the World Health Organisation defined sexual health as:

... a state of physical, emotional, mental and social well-being in relation to sexuality: it is not merely the absence of disease, dysfunction or infirmity. Sexual health requires a positive and respectful approach to sexuality and sexual relationships, as well as the possibility of having pleasurable and safe sexual experiences, free of coercion, discrimination and violence. For sexual health to be attained and maintained, the sexual rights of all persons must be respected, protected and fulfilled.

Sexual health is an important part of both physical and mental health and is essential to general well-being. Good sexual health is aided by access to information and services that help avoid the risks of unintended pregnancy, sexually transmitted infections (STIs) and of harmful relationships. The consequences of poor sexual health can be serious and costly for the individual, for health and social services and for society as a whole.

In this context, the vision for sexual health in Derbyshire is

All people in Derbyshire, irrespective of factors such as where they live, their age, gender, ethnicity and sexual orientation have good sexual health, and access to good quality, welcoming services without fear of stigma or prejudice

The purpose of this document is to set out a strategy for Derbyshire in order to realise our vision.

2. Sexual Health in Derbyshire, 2017 – local need, opportunities and challenges

a. Health Needs Assessment

At County level, Derbyshire has good sexual health. Compared to England (2015), there is low prevalence of STIs and HIV; low rates of teenage conceptions; and high prescribing of Long-acting reversible contraception (LARC). There are particular challenges regarding uptake of STI screening and testing; HIV testing and abortions before 10 weeks gestation. Demographic groups such as men who have sex with men; young people, particularly vulnerable young people; and people living in deprived communities are at increased risk of poor sexual health (see Appendix II: Health Needs Assessment data, June 2017).

b. Stakeholder and Public Consultation findings

Consultation activity has been carried out with professional stakeholders and the general public including work with vulnerable groups to inform future procurement of services and the themes underpinning this Derbyshire strategy. The key findings are as follows:

- Improve visibility of services
- Improve availability of appointments/ waiting times for appointments
- Improve the accessibility of services, particularly in rural locations where travel is a barrier
- Address barriers to vulnerable groups, particularly focussing on reducing the fear of prejudice and stigma
- Support the whole Derbyshire population towards improved resilience and self-care of their own sexual wellbeing
- Develop outreach clinical services for those most at risk

- Explore alternative options for service access e.g. SMS, online services, postal kits
- Improve communication with partners
- Ensure the workforce is suitably trained – match competencies to demands on the service
- Ensure absolute confidentiality and anonymity
- Improve communication between partners at strategic and service level
- Explore extended community provision through general practice and pharmacy alongside appropriate funding

3. Derbyshire Sexual Health System

In Derbyshire there is a comprehensive sexual health delivery system commissioned by three organisations:

- Derbyshire County Council
- Clinical Commissioning Groups
- NHS England

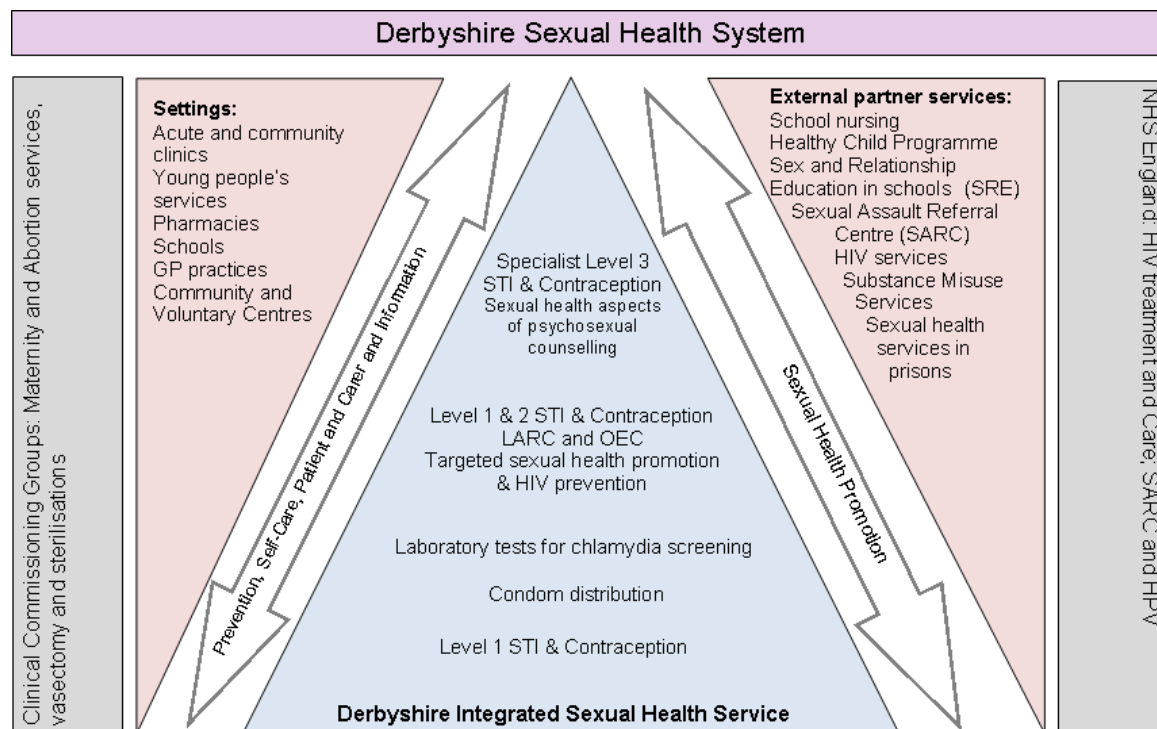

Table 1 outlines the responsibilities of each commissioner, in accordance with mandated duties under the Health and Social Care Act 2012.

Table 1: Commissioning Responsibilities

Derbyshire County Council	Clinical Commissioning Groups in Derbyshire	NHS England
Community contraception and including: <ul style="list-style-type: none"> • Long Acting Reversible contraception (LARC) in general practice • Emergency contraception in pharmacy Community STI diagnosis and treatment Targeted Sexual Health Promotion and HIV prevention Free Condom scheme (C-Card) Psychosexual services (sexual health element)	Abortion services Vasectomy and sterilisation services Gynaecology services Psychosexual services (non-sexual health element)	HIV treatment and care including pre and post prophylaxis Contraception provided under the GP Contract Cervical screening Opportunistic promotion and testing of STIs Sexual health in prisons Sexual Assault Referral Centres (SARC)

Figure 1 shows the inter-relationships between Derbyshire Integrated Sexual Health Service, Commissioning Partners and additional provision which impacts on a person's sexual wellbeing.

Figure 1: Derbyshire Sexual Health System: Integrated Sexual Health Service and Partner roles

This Strategy seeks to bring together all elements of the system working within the agreed vision and strategic objectives. The development of the Sustainable Transformation Plan and a renewed focus on 'place' in the NHS and Local Authority can support joint working in communities to best meet the needs of local people.

It is also important to consider the perspective of current and potential users of services as we design the system. As an example, a pregnant 16 year old would come into contact with many different sources of information, advice and services as she makes decisions about her future (see Figure 2).

Figure 2 A service user perspective

Derbyshire Sexual Health Strategy 2017-2020

1. Vision

All people in Derbyshire, irrespective of factors such as where they live, their age, gender, ethnicity and sexual orientation have good sexual health, and access to good quality, welcoming sexual health services without fear of stigma or prejudice.

2. Aim

The aim of the Derbyshire Sexual Health Strategy is to enable the Derbyshire sexual health system to work together to support people to look after their own sexual wellbeing and to provide accessible and welcoming services which are focussed on prevention, early diagnosis and treatment, supporting vulnerable groups and tackling stigma.

3. Strategic Objectives

(i) To develop an effective and resilient Derbyshire sexual health system

We will deliver this objective by:

- Establishing governance of the strategy and system leadership of sexual health through the development of a multi-agency Strategic Partnership Group for Sexual Health who will develop and agree a work plan for 2017-20
- Strengthening the roles of the specialist service provider in leading development of the whole sexual health system, not just the elements of the service it provides
- Building on the success of the Sexual Health Network – engage the network as a key partner of strategy delivery; develop and agree a new network work plan for 2017-20
- Taking a multi-agency pathway approach to improving the range and quality of sexual health support
- Establishing a programme of workforce development to improve the effectiveness of interventions, advice, referrals and information provision
- Ensuring a shared understanding of sexual health need and services based on sharing data and intelligence

(ii) To ensure a continued focus on prevention, early diagnosis and treatment, in particular supporting vulnerable groups

We will deliver this objective by:

- Improving resilience amongst the population to empower people to maintain their own sexual wellbeing
- Improving uptake of screening for Sexually Transmitted Infections (STIs) especially chlamydia in the under 25 age group
- Improving uptake of STI testing and HIV testing by providing more flexible and responsive services
- Improving uptake of contraception with a focus on Long Acting Reversible Contraception (LARC) by reviewing the current LARC offer in all settings, the training needs of staff and responding to these training needs
- Maintaining and ensuring focus on at-risk groups in each of our strategic actions

- Improve prevention at an individual level to ensure a person has skills and knowledge to access services, supported by self-confidence and the principle of self-care
- Improve early access to abortions at 10 weeks
- Monitor service uptake in line with need and responsive to emerging trends based on shared data and intelligence

(iii) To ensure that Derbyshire residents have confidence in the full range of services to support their sexual health and are able to access appropriate support and advice, at a place and setting convenient to them

We will deliver this objective by:

- Recognising that empowerment is an important component of sexual health and wellbeing
- Building self-care and resilience across the whole population and including those most vulnerable
- Ensuring Derbyshire residents can readily access good quality information online about sexual health and sexual health services
- Reviewing the accessibility and location of sexual health services to ensure services are provided at times, places and settings convenient to individuals
- Identifying opportunities to further develop and improve the provision of sexual health services within primary care and pharmacy settings
- Developing systems to ensure people can book an appointment with ease where appropriate
- Developing innovative approaches through the use of technology including online, SMS and postal services

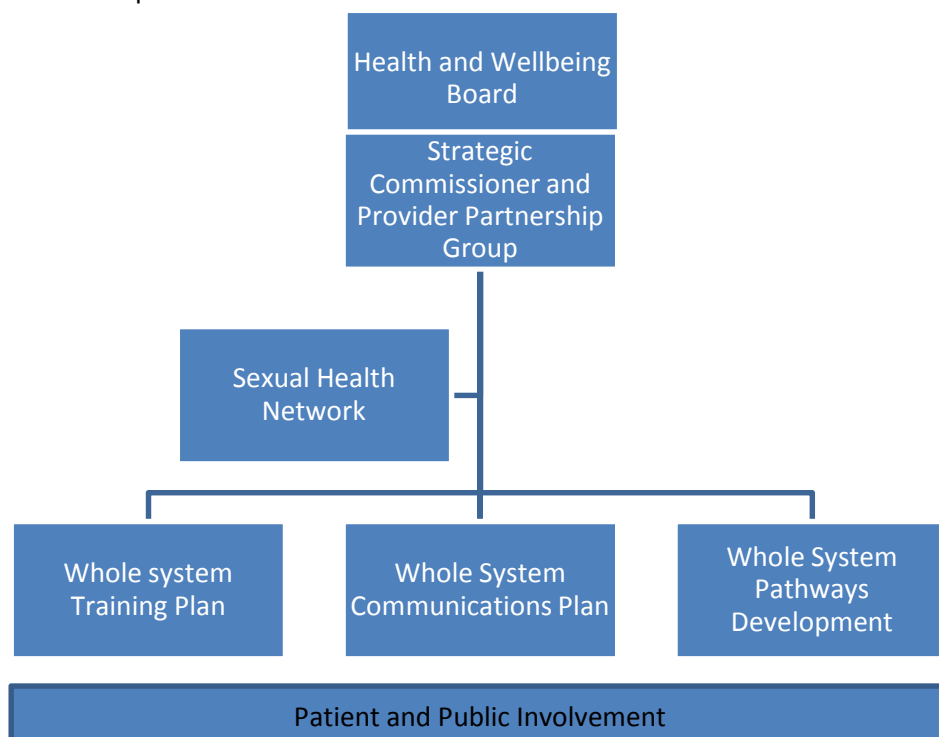

(iv) To reduce the fear of stigma around sexual health and accessing sexual health services

We will deliver this objective by:

- Developing a programme of wider workforce development – building on MECC and ‘teachable moments’
- Providing outreach information and health promotion to meet the needs of people who fear stigma and to build their confidence in their rights and responsibilities
- Ensuring communications and social marketing implemented across the sexual health system and wider partners is consistent and joined-up
- Building on recent consultation and engagement, continue to involve users and non-users in the further improvement and development of sexual health services
- Developing and implementing an agreed Governance and monitoring procedure across the whole system

4. How the strategy will be delivered

In order to fulfil the aims of the strategy the following infrastructure will be developed with overall governance located with the Health and Wellbeing Board. The Strategic Partnership Group will oversee design and delivery of multi-agency action plans relating to workforce, communications and service pathway design which in turn will be led by key partners in the system. Key themes present in each of the work plans will be patient and public involvement, and the reduction of fear of stigma. This structure will be in place by September 2017.

5. How we will measure success

We will measure overall success using the measures in the Public Health Outcomes Framework, supported by local service and pathway measures. In particular we will focus on:

Improving outcomes relating to:

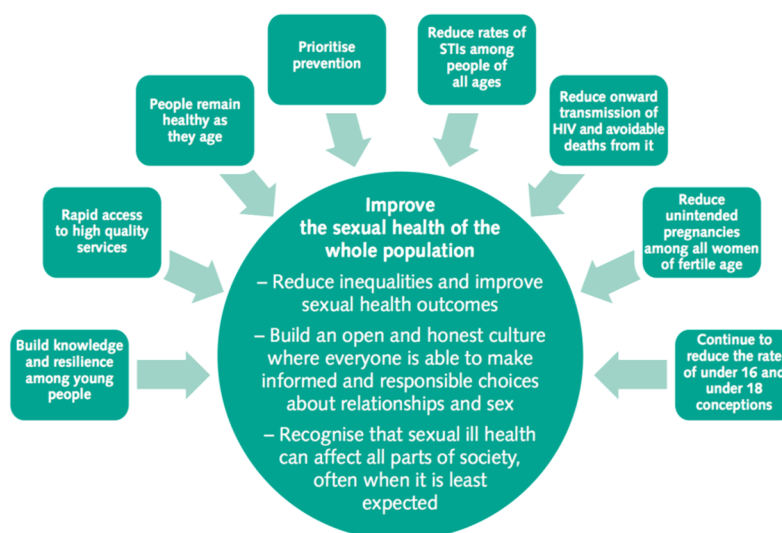

- Uptake of STI screening and testing
- HIV testing
- Abortions before 10 weeks gestation
- Vulnerable groups

Maintaining outcomes relating to:

- Prevalence of STIs and HIV
- Low rates of teenage conceptions
- High prescribing of Long-acting reversible contraception (LARC)

APPENDIX I – National Policy Context

The key policy document at national level is *A framework for sexual health improvement in England (2013)*. The objectives from the document are summarised in the diagram below taken from the document (p10).

Appendix II – Local Health Needs Assessment Data

Indicator (Source: Sexual and Reproductive Health Profile, Public Health England)	Period	England	Derbyshire (Admin)	CPFA Neighbours Min	CPFA Neighbours Ave	CPFA Neighbours Max	Trend	Change from previous	Amber Valley	Bolsover	Chesterfield	Derbyshire Dales	Erewash	High Peak	North East Derbyshire	South Derby
