

An Energy Strategy for Derbyshire

Denise Ludlam, Principal Policy Officer,
Policy & Research

An Energy Strategy for Derbyshire?

The energy sector is changing. Derbyshire needs to respond to these changes:

- Feedback on draft Energy Strategy
- Discussion of priorities
- Agreement on the way forward for Derbyshire

The Energy Trilemma

- Security
- Affordability
- Decarbonisation

Energy Security

- <50% gas from UK production
- ~25% electricity generated by gas-powered power stations
- 29% energy is from renewables
- 20% energy is from nuclear
- 1/5 of power stations due to close

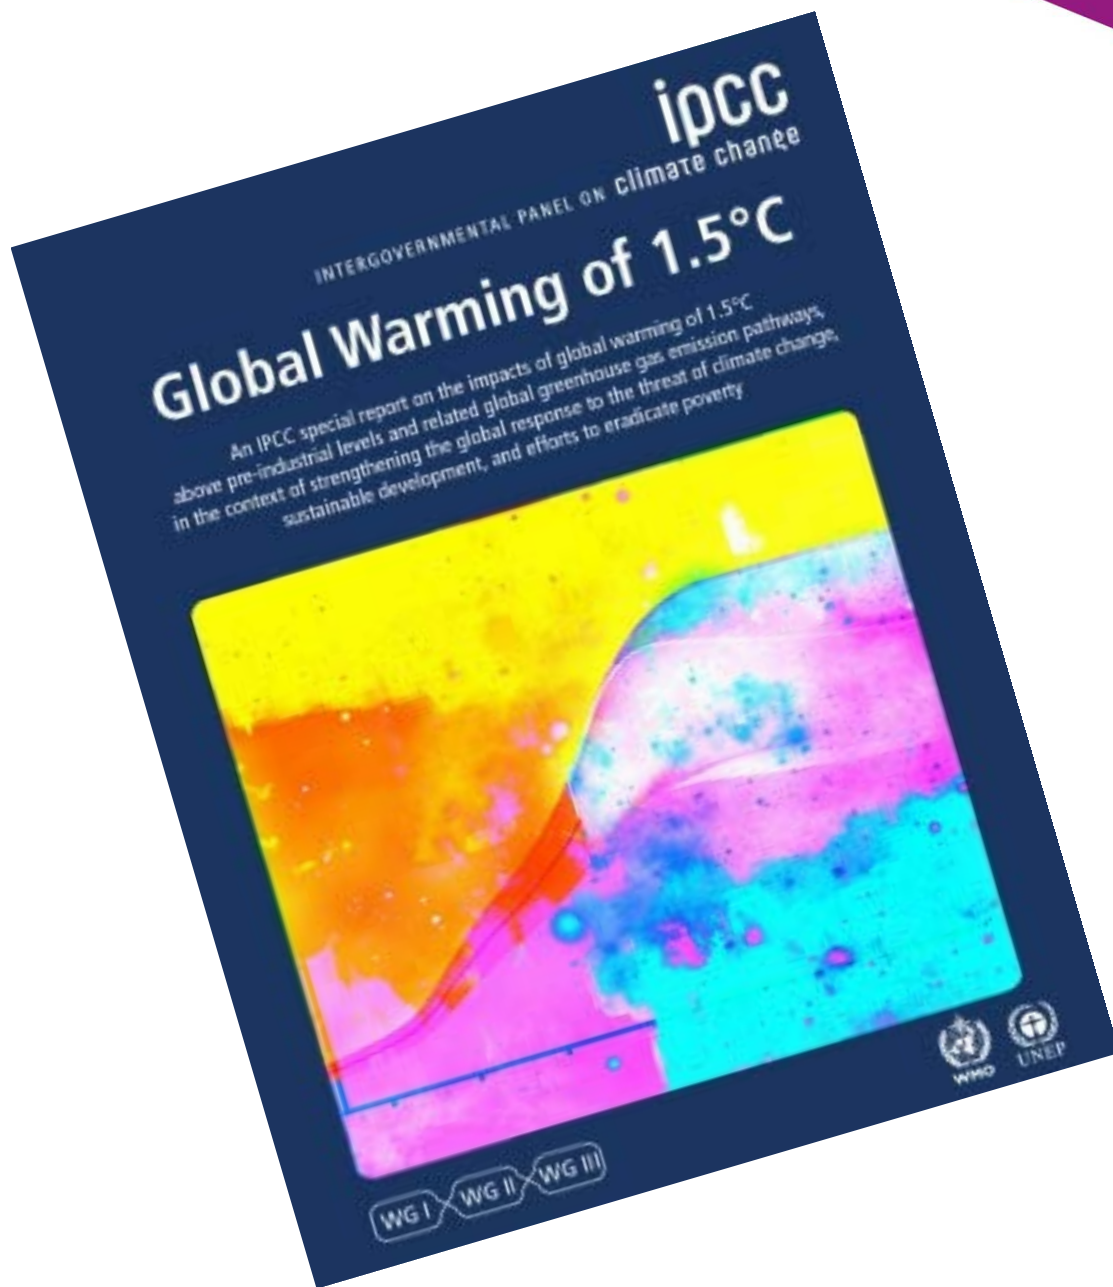

So, where is our power going to come from ?

Energy Affordability

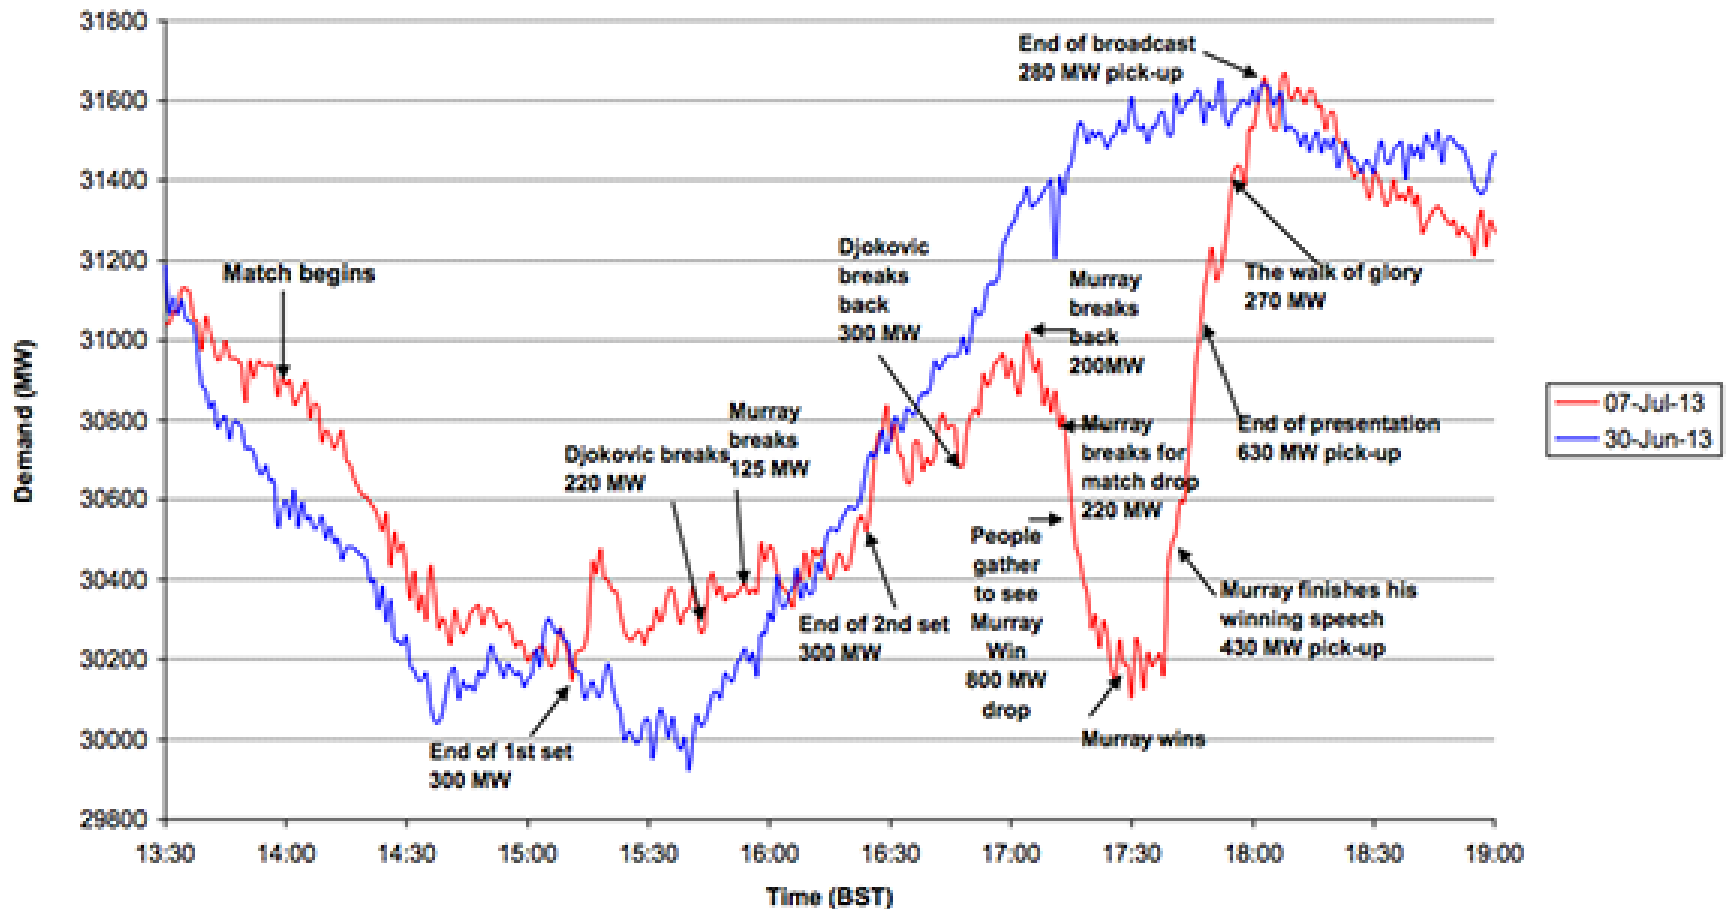

**How do we make
energy
affordable?**

- Energy prices have doubled since 2005
- 11.6% of households in fuel poverty
- ~1/5 households are 'off-gas'
- DCC energy costs are increasing despite a 36% reduction in energy use
- Energy affordability for business

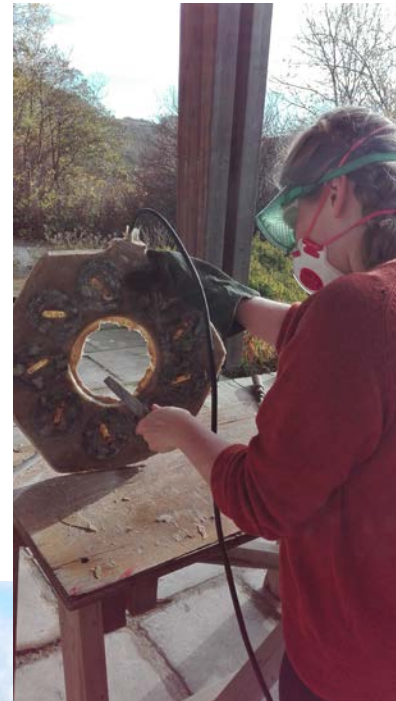

Climate Change

Energy supply, demand & distribution

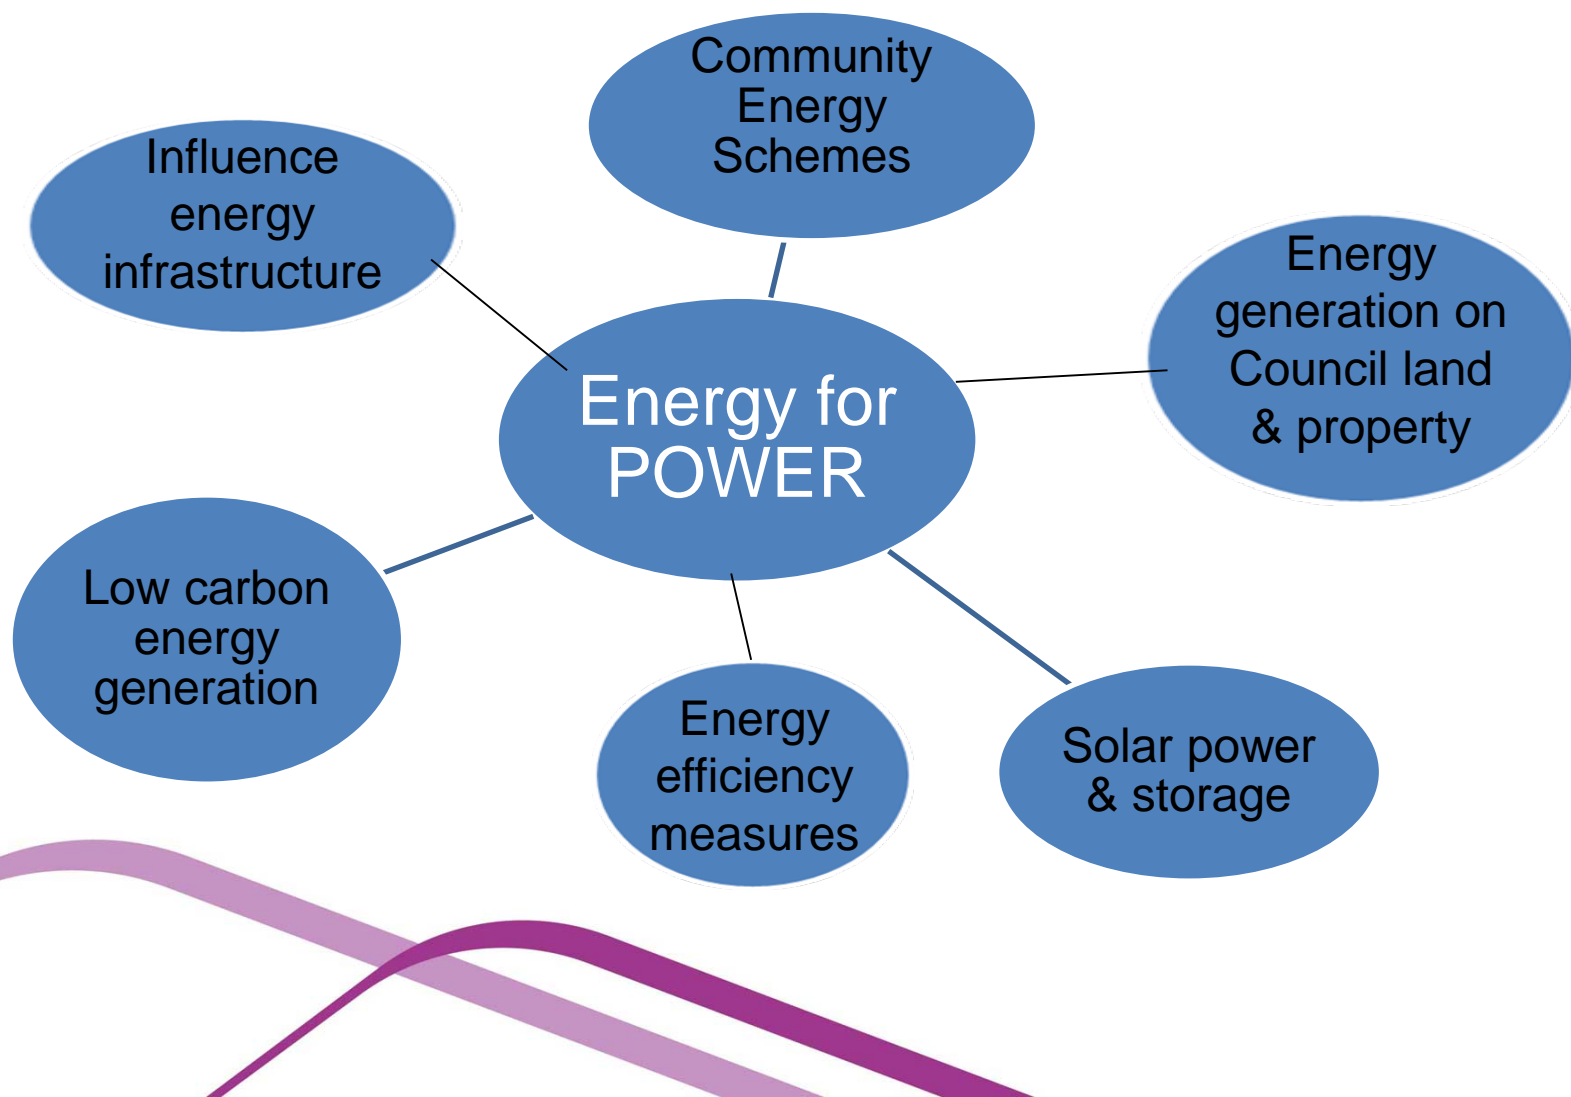

Energy supply, demand & distribution

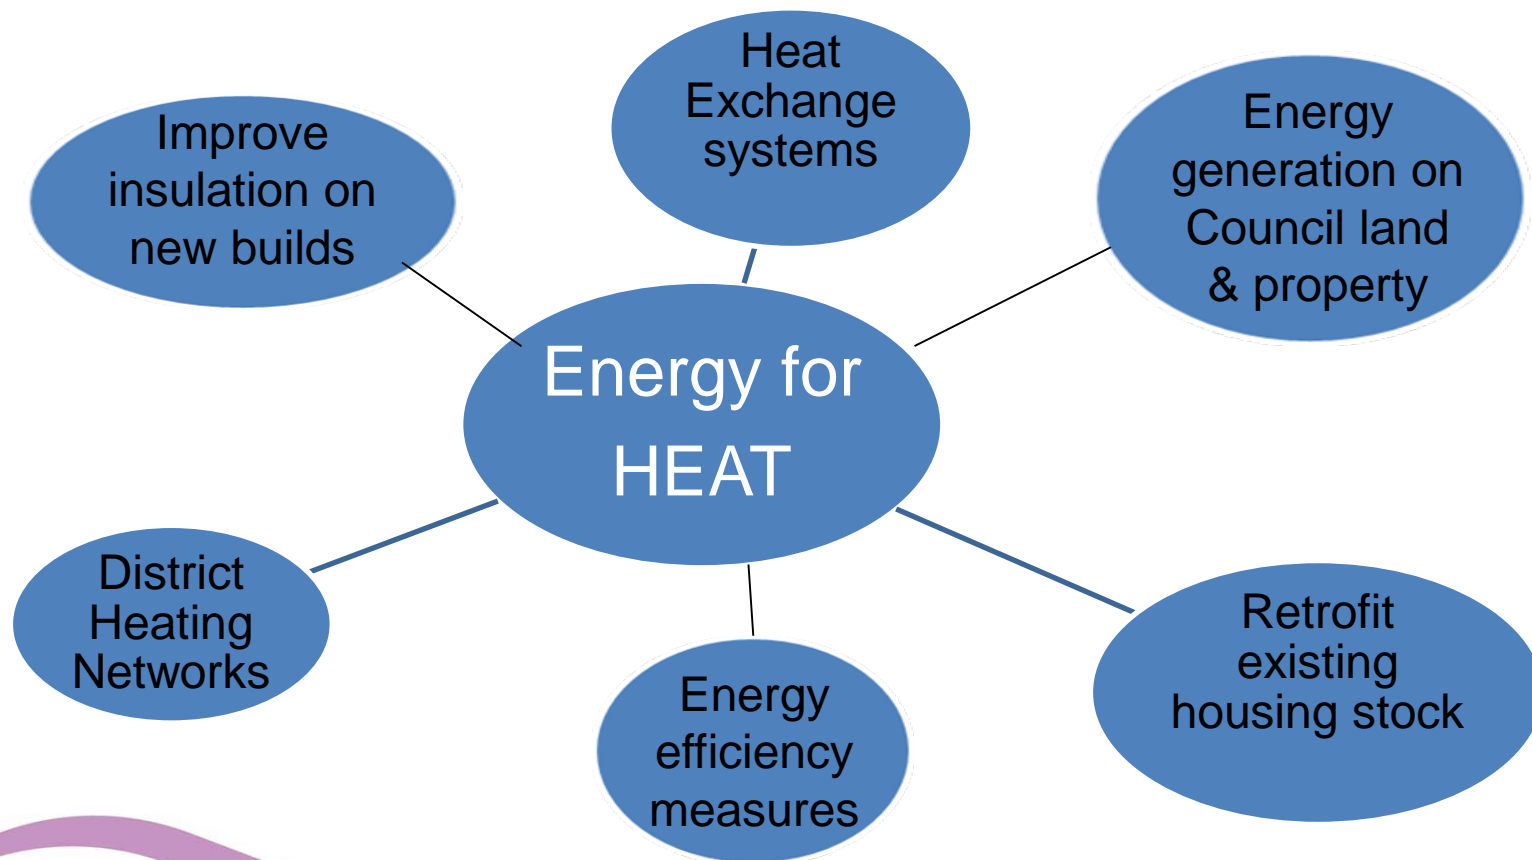

- Reduce demand
- Renewable Energy
- Flatten peak
- Battery storage
- Decentralise
