### **CONSTRAINTS**

## **Policy constaints:**

Green Belt designation and there is a wildlife site in the area

# Physical constraints (i.e. topography):

None known other than potential access issues and relationship to the urban area

## **Environmental constraints including flood risk:**

There are nature conservation designations in the area

#### **Access constraints:**

Access would be onto the local highway in Spondon and depending on the size of a development could be problematical. Linking the development site to the highway could be an issue

| Ownership constraints:                                                                                                                                                          |                                                                              |                                                                   |                                               |                 |                        |

network is also quite poor with the site being accessed of local roads to the north of Spondon.

There us no known developer interest and this as well as the policy constraints means that the site is not considered developable. It is available and would probably be viable as a greenfield site.

The promoters have indicated very large dwelling numbers but only 8.6 hectares of developable area. For the purposes of the SHLAA a density of 30 dweelings per hectare has been applied to achield a potential site capacity of 260 dwellings.
