

Use a split pin to attach the wings to Puffin's body.

Make Puffin flap!

A bit more complicated – you will need two sticks – a small garden cane, lollipop or wooden coffee stirrer works well. You will also need some wire (plastic coated wire used in packaging is ideal).

Fix the wings to the body using split pins.

Secure one stick to the back of the puffin using glue or sellotape

Make two wire loops to hold second stick on top of the first so it can move up and down.

Run a piece of wire from the top of the second stick to each wing.
